

Gait- reeducation LeviActive

Gait re-education, upright positioning and physiotherapy

LeviActive - Exercise and Rehabilitation System

PKLC-AZ (incl. Q140 hoist) / PKLC-A (excl. Q140 hoist)

LeviActive is a multifunctional rehabilitation and exercise system mounted to the wall, designed for use at home and in rehabilitation settings. LeviActive together with its accessories provides the possibility of carrying out a range of exercises, upright positioning and gait re-education. The whole system is designed to allow multiplanar movement - essential when performing functional exercises. Thanks to the modular design of the accessories and their easy availability it also allows exercising from a seated position, without having to leave the wheelchair.

LeviTrainer hanger:

1. Rotating bolt of the hanger
2. Insert holes for fixing the resistance bands to the LeviKam Trainer sling
3. Points for attaching exercise handles
4. Clip hooks
5. Rotation lock
6. Resistance bands

LeviActive wall base:

1. Wall fixing
2. Attachment for LeviCare Q140 hoist
3. Wall attachment for LeviActive accessories
4. Holes for fixing exercise accessories

LeviKam Trainer sling:

1. Elastic torso strap
2. Torso strap buckles
3. Leg strap buckles
4. Leg straps
5. Girding leg straps
6. Brackets for elastic bands and attachment
7. Underarm support
8. LeviSeat

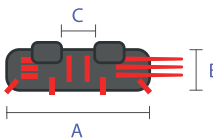

LeviKam Trainer

LAT-M

The LeviKam Trainer sling has been designed to provide the user with full torso stabilisation and safety during exercise or rehabilitation. The soft filling of the sling in the areas of maximum strain guarantees full comfort of use without unpleasant pressure or chafing around the armpits and thighs. The material used in the production of the sling allows for air circulation without causing the body to become chafed. Thanks to the use of durable buckles and adjustable straps, the LeviKam Trainer is easy to use and fits any body shape.

The waistcoat may be attached to the hanger by means of resistance bands or straps. The number of resistance bands determines the level of pressure relief and the possibility of changing the pressure relief may contribute to the progress in the rehabilitation process.

LeviKam Trainer	XXS size	XS size	S size	M size	L size	XL size	XXL size
